Clear Coated

There is a raw beauty in a natural Teka luminaire. Before the metals begin to patina and change in the elements, the freshly blasted copper and brass are lustrous and vibrant. These inherent characteristics are so desirable, we are often asked if it is possible to retain this look indefinitely.

Over the years we have researched and tested a practical solution to retaining the natural beauty of these sustainable materials. Ceramic clear coating is the answer. This optional process provides long lasting protection over natural or polished finishes – even in the harshest of outdoor environments.

HOW DOES IT WORK?

The glimmering surface of freshly blasted copper or brass reveals its most porous condition. Our ceramic clear coat seals the metal at this moment – keeping it as close to a natural state as possible. This process is equally effective with polished brass and copper, eliminating the need for re-finishing or re-polishing the luminaire.

With remarkable adhesion to a variety of surfaces and resistance to most solvents and cleaners, our exclusive process keeps Teka luminaires looking like new. In addition, clear coat is resistant to many types of graffiti, solvents, and chemicals, extending the useful life of the fixture.

BENEFITS

- Seals and protects natural or polished finishes.
- Maintains finish appearance. Eliminates the need for re-finishing or re-polishing.
- Protects against scratches, chips, and abrasions.
- Provides good U.V. protection against discoloration and fading.
- Highly impervious to chemicals, particulates, and solvents – often used in close proximity to landscape lighting.
- Graffiti resistant.
